

Name of the indicator	11.6.2 Annual mean levels of fine particulate matter in 12 agglomerations
Sustainable Development Goal	Goal 11. Sustainable cities and communities
Target	11.6 By 2030, reduce the adverse per capita environmental impact of cities, including by paying special attention to air quality and municipal and other waste management
Definition	Value of standardized average annual concentration of PM 10/PM 2,5 in 12 agglomerations.
Unit	µg/m ³
Available dimensions	PM 10, PM 2,5
Methodological explanations	PM 10 is particulate matter with a particle diameter equivalent to less than 10 µm. PM 10 limit of average annual concentration value: 40 µg/m ³ . PM 2,5 is particulate matter with a particle diameter equivalent to less than 2,5 µm. PM 2,5 limit of average annual concentration value: 25 µg/m ³ .
Source of data	Chief Inspectorate of Environmental Protection
Data availability	Annual data; Since 2010.
Notes	Proxy indicator, available within the Polish public statistics. An original indicator, adopted by the UN for monitoring target 11.6 of the 2030 Agenda is 11.6.2 Annual mean levels of fine particulate matter (e.g. PM2.5 and PM10) in cities (population weighted).
