

Name of the indicator	6.3 Exploitable underground water resources per 100 thous. inhabitants
Sustainable Development Goal	Goal 6. Clean water and sanitation
Target	-
Definition	Part of underground water resources, which may be collected from a given aquifer without disturbing the hydrogeological balance, in accordance with the principles of their conservation and technical conditions, per 100 thousand inhabitants.
Unit	cubic hectometers [hm ³]
Available dimensions	total
Methodological explanations	Exploitable underground water resources constitute a part of resources, which upon consideration of their protection and technical conditions may be extracted from a particular water-bearing level without interference with hydro-geological balance.
Source of data	Polish Geological Institute – National Research Institute / Statistics Poland
Data availability	Annual data; since 2010
Notes	-
