Name of the indicator	**10.1.1 Growth rates of household expenditure or income per capita among the bottom 40 percent of the population and the total population**
Sustainable Development Goal	Goal 10. Reduce inequalities
Target	10.1 By 2030, progressively achieve and sustain income growth of the bottom 40 per cent of the population at a rate higher than the national average
Definition	Annualized average growth rate in per capita net disposable income in households over a 5-year period.
Unit	percent [%]
Available dimensions	total, the first and second quintile with the lowest incomes (bottom 40 per cent of the population)
Methodological explanations	The indicator is calculated on the basis of information obtained from the EU-SILC survey. **EU-SILC survey (European Union Statistics on Income and Living Conditions)** is a constant survey (conducted every year) whose subject are households and persons aged 16 and more in households. The survey is a panel study, i.e. selected group of respondents is subject to several rounds of "observation" at intervals, so that it allows to observe and analyze the changing situation, attitudes, behaviour or opinions of a surveyed group. Survey is conducted by face-to-face interview techniqueusing 2 questionnaires; one of which is used to obtain data on households, and the second to obtain data on individuals. The purpose of EU-SILC survey is to obtain information which allows the assessment of living conditions of Polish society and allows to compare them to the living conditions in other countries of European Union. This is achieved by adoption of a uniform methodology by Eurostat. At current requests of European Union authorities, module surveys devoted to selected issue are also conducted within EU-SILC survey (that is an additional questionnaire proceeded together with the basic survey). Central Statistical Office of Poland implemented EU-SILC survey in 2005. **The survey unit is a household**, which is understood as the persons who may be related or unrelated, living together and maintaining themselves jointly (multi-person household). Household can also be formed by one individual maintaining himself/herself independently, regardless of whether the individual lives alone or with other persons (one-person household). A household is classified into a given **quintile groups** on the basis of per capita available income in that household. Thus members of all the households in the survey are listed according to the increasing per capita available income using the weights applied in the survey and divided into five groups, equal in number of the weighted persons. The first quintile (I) consists of 20% of persons with the lowest incomes, while the fifth quintile (V) – 20% of persons with the highest incomes.
Source of data	Statistics Poland
Data availability	Annual data: Since 2010.
